

JungleWall

Wall absorbent

Design: Superlab

JungleWall

Wall absorbent

Design: Superlab

JungleWall is a series of sound absorbent leafs in different patterns. The material is made of felt and the leafs are mounted in a way that creates a distance to the wall. In addition, the material in JungleWall, along with the distance to the wall, creates a good condition for sound absorption. JungleWall is advantageously used in large quantities in a workplace / public environment like a background wall.

DIMENSIONS

Banana Leaf

Monstera

Royal Fern

3 different leafs.

Thickness: 5 mm

Weight: 800 g/m² (appr. 100 g / leaf)
